Advisory Committee

Mr. Mihir Kumar Barik, President, RAITED & KTTIHS

Mr. Srikanta Mahata, President of GGMC

Dr. Jatanta Mete, Professor in Education, University of Kalyani,

Dr. Tarak Nath Pan, Ex-Professor in Education, Visva-Bharati University

Dr. Binoy Chanda, Retd I.C, Vidyasagar University,

Prof. Ramakanta Mohalik, Professor in Education, NCERT,

Bhubaneswar,Odhis

Prof. Tuhin Kumar Samanta, Professor in Education, Burdwan University,

Prof. Naba Kumar Mondal, Professor in Environment Science

Dr. Chitralekha Mehera, Associate Professor in Education, Burdwan University

Dr. Amal Kumar Chakraborty, Associate Professor and HOD, Dept. Of Education, Raigang University, W.B.,

Dr. Santash Kumar Behara, Associate Professor and HOD, Dept. Of Education, Kazi Nazrul University, Asansol, W.B

Dr. Sumanpal Bhikkhee, Faculty, Dept. of Pali, Calcutta University, W.B.

Dr. Sankar Kr. Das, Associate Professor and HOD, Dept. of History, Bankura University, W.B

Dr. Shaikh Sirajuddin, Principal, Saldiha College, Bankura, W.B.,

Dr. Sunil Kumar Baskey, Assistant Professor in Education, Rabindra Bharati University, Kolkata, W.B

From the desk of organizing secretary

It is great pleasure to note that members of the organizing committee are going to organize one day international webinar on 'Inclusive Education: Emerging Issues ,Challenges and Policy Perspectives' in Association with with Rishi Aurobindo Institute of Teacher Education, Department of Education ,Gourav Guin Memorial College and kultikri teacher training institute of higher studies on 4th August 2020 by online mode through zoom and YouTube live and a 'Seminar Abstract book' will be brought out as part of this webinar. We are delighted to know that respected professors, researchers, students from the own state, neighbouring states and abroad will participate in the webinar.

We are sure that the Webinar would be beneficial for all the Students, Teachers, researchers and the participating colleges and would also help them to prepare a roadmap for the coming years to enhance their education prospects.

On this occasion we extend our felicitations and congratulations to all the members and wish the Seminar a grand success.

Dr Pankaj Kumar Paul

HOD & Assistant Professor

Department of Education

Gourav Guin Memorial College

of Teacher Education

Organising secretary

Programme Schedule of International Webinar

Date: 4th August' 2020

Time: 3:00 PM to 5:00 PM

International Webinar on “Inclusive Education: Emerging Issues, Challenges & Policy Perspectives.”

Scheduled Programme	Approximate Time
Inaugural Programme by Miss Sulagna Chakraborty, Mrs. Saheli Bera, Mr. Sankhadip Jana	3:00 P.M. to 3:05 P.M.
Welcome address by Dr. Avijit Roy Choudhury, Honourable Inspector of Colleges, Vidyasagar University	3:05 P.M. to 3:10 P.M.
Keynotes address by Renowned Professor Dr. Bishnupada Nanda Prof in Education, Jadavpur University, Jadavpur, West Bengal Topic: Present Scenario of Inclusive Education in the COVID Situation	3:10 P.M. to 3:40 P.M.
Speech by Illustrious Resource Person Dr. Khaleda Gani Dutt, Assistant Professor, Dept. of Special Education, Stockholm University, Sweden Topic: Inclusive Education in Sweden	3:40 P.M. to 4:10 P.M.
Speech by Renowned Resource Person Dr. Prarthita Biswas, Head, Department of Education, School of Education, Adamas University, Adamas Knowledge City, West Bengal Topic: Inclusive Education: Practice & Problems	4:10 P.M. to 4:40 P.M.
Speech by Respectable Resource Person Dr. Amulya Kumar Acharya, Associate Professor & HOD, PG Dept. of Education, Fakir Mohan University Odisha, India Topic: Policy Perspectives in Inclusive Education: Issues & Challenges	4:40 P.M. to 5:10 P.M.
Paper Presentation by Participant	5:10 PM to 5:30 PM
Vote of Thanks by Mr. Mithun Barik, Secretary, Rishi Aurobindo Institute of Teacher Education	At the end of the Webinar

Inclusive Education in India & Initiatives for Inclusive Education at Global Level

Dr.Tuhin Kumar Samanta

Professor, Department of Education

The University of Burdwan

Abstract

According to the Salamanca statement and Framework for action on special Needs education (1994) inclusive education means that “ School should accommodate all children regardless of their physical , intellectual , social, emotional, linguistic, or other condition , These should include disabled and gifted children, street and working children, children from remote or nomadic populations children from linguistic , ethnic or cultural minorities and children from other disadvantaged or marginalised area or groups ” India has progressed from lack of infrastructure and resources for the disabled to special school to cater to their needs in the 1990 and finally towards inclusion of these children in the mainstream in recent year. India has been an active participant in the Global Declaration on protection of Right of persons with Disabilities UN convention on the Rights of the child and above mentioned Salamanca Declaration and other international policy initiatives. According to 6th All India educational Survey (NCERT) 1998 of India is 200 million children (between 6-14 year) 20 million need special care. As per UNICEF ; it is estimated that 70% of disabled children can attend regular school if provided the appropriate environment . According to the UNICEF ; report on the status of Disability in India 2000 states that there are around 30 million disabled children in India.

Key Words: Salamanca statement–Inclusive education in India-Global declaration- UNICEF- 30 million children.

Policy Perspective in Inclusive Education: Issues and Challenges

Dr. Amulya Kumar Acharya,
Associate Professor and Head,
PG Department of Education,
Fakir Mohan University

Abstract

The constitution of India clearly states in the preamble that everyone has the right to equality of status and opportunity. The article 41 of the directive principle of the Indian constitution supports the right to work, education and public assistance in certain cases including disablement. Article 45 commits to the provision of free and compulsory education for all the children up to the age group of 14 years. 86th and 93rd amendment also mentioned all the children should get free and compulsory education in the age group 6-14. Besides that since post independence starting from the Radhakrishna Commission to till date all the Committee, Commission, Act and policies have stressed and suggested Education for All including disabilities but it fails to achieve its core objectives. The terminology has been changed from time to time as per the suggestions but the objective is still to achieve. Inclusive Education is a new approach towards educating the children with disabilities with that of normal ones within the same roof. It seeks to address the learning needs of all children with a specific focus on those who are vulnerable to the marginalization and exclusion. Inclusive Education implies all learners with or without disabilities being able to learn together through access to common pre-school provisions, schools and community educational setting with an appropriate network of support services. However, it is an admitting fact that about 80 percent of Indian population lives in rural areas without provision of special schools and learning atmosphere suitable to them.

There are numerous issues and challenges to meet the need of diversified students with appropriate learning strategies. Therefore we need to promote and access inclusive classrooms to meet their needs and challenges. Measures

to be taken by the state government, central government and NGOs for ensuring equality, equity and moreover to achieve an equitable and inclusive education system in a time bound period.

Key Words: Inclusive Education, Policies and Acts, Issues and Challenges

Inclusive Education Practices & Challenges in India

Dr. Prarthita Biswas (Associate Prof.)

Head of the Dept. & Ex Dean (Acting),
School of Education, ADAMAS UNIVERSITY,

Abstract

Inclusive education relies on the easy concept that each child and family is valued equally and deserves identical opportunities and experiences. Inclusive education is regarding children with disabilities –whether the incapacity is gentle or severe, hidden or obvious –participating in everyday activities, similar to they had if their incapacity weren't gift. It is regarding building friendships, membership and having opportunities similar to everybody else.

Inclusive Education (IE) is another approach towards educating the young with incapacity and learning difficulties therewith of normal ones within an identical upper side. It brings all students along in one schoolroom and cluster, paying very little relevance of their qualities or shortcomings in any region, and tries to build up the potential of all students. It is a standout amongst the most effective manners by that to advance associate inclusive and tolerant society without associating them into the boundaries of extraordinary situations., Provisions will be created for a child with an exceptional want who will be given an equal opportunity with completely different general students having equal quality. For creating progress in inclusive education in India, there lie many hindrances and challenges. several issues, to illustrate, absence of accomplished educators, instructional modules, assets, strong infrastructural offices, attentiveness, ascent disposition, plans, and methods are creating obstacles for broadening the concept of inclusive education in Jndja.

Among commonly mentioned obstacles one amongst the main problems is to arrange nice, viable and skilful teacher who will lead and follow inclusive education adequately. On these lines it is vital to research many problems creating obstacles within the field of inclusive education with exceptional

regard to teacher preparation. The present paper is to point out to the hindrances and expand challenges within the field of inclusive education in India with exceptional regard to teacher preparation.

Key Words: Inclusive education, opportunity, challenges.

Inclusive Education and Alleviation of Social Disparities: A Study with Special Reference to Bankura District in West Bengal

Dr. Pankaj Kumar Paul

Assistant Professor & HOD, Department of Education,
Gourav Guin Memorial College

Abstract

An attempt has been made to analyze the impact assessment of inclusive education in alleviating social disparities of students of Bankura district in West Bengal. The present study includes of 160 school's students both in urban and rural areas including boys and girls of APL and BPL classes of this district in West Bengal. Furthermore, the normal as well as deviate i.e., exceptional children are taken as consideration for the present study. The views of 100 teachers and 100 guardians are also undertaken for field survey purposes. The analysis are undertaken by the non-parametric 'chi-square' test and the results indicate that inclusive education has a significant positive impact in making a platform for alleviating disparities in education among the students in different sections of the society. Moreover, a multiple regression model has been built-in to establish the nature and magnitude of association between inclusive education and a set of selected indicators (i.e., learning environment, curriculum, trained teachers, community involvement and Govt. policy) on which implementation of inclusive education depends. Again, students' t- test has also been used to look at the assumed hypothesis whether any inconsistency among students about their understanding about inclusive education comprising of APL & BPL, rural & urban and normal as well as deviated students or exceptional children exist or not.

Key Words: Inclusive education, social disparities, community support, social attitude.

Inclusive Education : Have to Turn more Stones

Dr. Bhabesh Pramanik, Principal

Institute of Education

Abstract

Inclusive Education is a process of strengthening the capacity of the education system to reach out to all learners and can thus be understood as a *key strategy* to achieve EFA. It seems that education is a basic human right and the foundation for a more just and equal society. An ‘inclusive’ education system can only be created if ordinary schools become more inclusive – in other words, if they become better at educating all children in their communities. We have crossed Constitution’s oath, Kothari Commission, 2005 *Action Plan*, 2006 National Policy for People with Disabilities recently, *inclusive policies* on education. However, these policies often are not perfectly inclusive. Many of them tend to discriminate against people with “severe” disabilities, or people with intellectual disabilities. At present, the problem is with *implementation* of the said policy and moreover educating the *mainstream* teachers who need to *change the attitude*. There is no curriculum for children with special needs to help them remain in the mainstream education. This creates *segregation* between people with and without disabilities. At present; there is no institutionalized *mechanism* for such assessment. There is very few *infrastructure* are find in the institution for the disables.

The present paper aims to study the *national initiative* for Inclusive Education. The investigator collected data from 50 Govt. and non-Govt. aided school teachers of Purba Medinipur district and analyzed data by qualitative method to prove we have to go miles to ensure Inclusive Education truly.

Key words: Key strategy, Action Plan, inclusive policies, implementation, mainstream, change the attitude, segregation, mechanism, infrastructure, national initiative.

Role of Teacher-Educators in Promoting Inclusive Education Concept in Teacher Education Institutions of India

Dr. Santanu Bhattacharya

Associate Professor

I.A.S.E., Kunjaban

Abstract

Inclusive education is said to be a continuous process. It essentially in one way takes care of diverse needs and abilities of students and in the other, strives too for eliminating all kinds of discrimination which an educational institution may face at a time. Therefore the task of the teacher is very crucial to meet those challenges. In teacher education institutions too, the role of every teacher-educator is to create conducive environment in which all student-teachers can learn and feel they belong. After all, all student-teachers should feel that at a certain age they are provided with meaningful, high-quality educational opportunities which actually they require. Here every teacher-educator should function in such a way that they can lead their students towards excellence and equity in order to achieve quality education. Hence, the paper reviews the roles and responsibilities of teacher-educators working in different teacher education institutions of India whose main task would be to focus on empowering teachers through training and support to address the diversity of learners. In addition they would also be able to establish a good inclusive education set-up in their respective teacher education institutions.

Key Words: Inclusive education, teacher-educators, roles and responsibilities, teacher education institutions.

Role of Teachers in Inclusive Classrooms:

An Overview

Dr. Nabanita Dutta

Assistant Professor in Education

Panskura Banamali College

Abstract

Inclusion in education was once desired as an approach where differently-abled children spend most or all of their time with non-disabled peers. Inclusive education has been internationally recognized as a philosophy for attaining equity, justice and quality education for all children, especially those who have been traditionally excluded from mainstream education on various grounds such as disability, culture, ethnicity, language, gender, and other human differences. The success of inclusive education depends upon many factors. Teachers' role and responsibilities are the essential components that ensure the success of any inclusive system. Now-a day's schools whether inclusive or non-inclusive students spend their precious time with teachers. It is teachers who look after the differential needs of students. Barrier-free inclusive environment can only be created if teachers accept the responsibility of including the differently-abled children in general classroom along with their non-disabled peers. The present paper highlights the role and responsibilities of teachers in inclusive classrooms.

Key Words: Inclusive education, differently-abled, teachers' role, non-disabled, inclusive classroom.

Educational Barrier Faced by the Mothers of Child with Autism Spectrum Disorder

Dr. Bappaditya Adak,

Assistant Professor, Department of education,
Vidyasagar Mahavidyalay

Dr. Santoshi Halder,

Associate Professor, Department of education,
University of Calcutta.

Abstract

Introduction: Having a child with Autism Spectrum Disorder (ASD) and meeting his/her educational needs is a daunting task for parents. As mothers are the primary care givers of child, they have to carrying more responsibility than fathers. But parents of children with ASD fail to access mainstream or special educational services in low resource countries. Also parents have minimal information, therefore they remain unsupported and neglected; and their children compel to live a home bound uneducated life. **Purpose:** Present study aims to explore the barriers faced by the mothers of child with ASD related to their children education. **Sample:** This exploratory and qualitative study has been conducted on 100 mothers of child with ASD from 13 special schools of in and around Kolkata. **Tools:** The participants were subjected to Educational Barrier Faced by the Mother Questionnaire (EBFMQ) for exploring the experiences related to accessing educational facilities. **Statistical analysis:** For analysis of the obtained data percentage wise table and bar graph plotted. **Results:** Findings indicated that mother's experience enormous trouble when searching for a better school and for their child they were not satisfied with classroom arrangement and teachers performance. Mothers also reported that they face difficulties for child's academic assistance in home.

Key Words: Autism Spectrum Disorder, Child, Mothers, Education, Barriers.

Skill Based Vocational Course for the Children with Special Needs

Dr. Shyamasree Sur

Assistant professor and Head

Department of Education,

Siddhinath Mahavidyalaya

Abstract

Persons with disabilities require assistance and skills to engage in livelihood activities. But they face with a number of challenges. Actually their families and communities themselves assume that they are unable to engage in such activities. So, they keep these persons void of basic education and making them unqualified to join skills training courses. As a consequence, these disadvantages frequently result in a lack of skills, as well as low confidence, expectations and achievement. Different types of skills are needed for successful work. These are: 1) foundation skills acquired through education and family life, 2) technical and professional skills which enable a person to undertake a particular activity or task, 3) business skills required to succeed in self-employment and 4) core life skills, including attitudes, knowledge and personal attributes. Improving employment opportunities for people with disability is very significant for enhancing quality of their life and substantial gains for country's economy. Proper and efficient vocational training develops capabilities of PWDs and they can compete in the labour market with other persons. it is the responsibility of Indian society for making suitable and quality vocational education and training more accessible to people with disabilities. My paper "Skill Based Vocational Course for Challenged Children" is need of the hour today. The paper tries to study the efficacy of procedure of vocational skills for Children with Special Needs and to study the effectiveness of vocational training to Children with Special Needs.

Key Words: Skill Development, Vocational Course, Children with Special Needs.

“A Study on Challenges of Inclusive Education in Present Scenario”

Dr. Sunanda Nanda Bera

Assistant professor of English

B.Ed Department

Seacom B.Ed College

Abstract

“Every child has the right to quality education and learning.”- UNICEF: Inclusive Education.

Inclusive Education is a relatively new concept, having gained international attention in 2000, following the Education for All campaign. In India, the 86th Constitutional Amendment guarantees education as a fundamental right to all and this includes the child with a disability. Inclusive education means that all students attend and are welcomed by their neighbourhood schools in age-appropriate, regular classes and are supported to learn, contribute and participate in all aspects of the life of the school. Inclusive education is about how we develop and design our schools, classrooms, programs and activities so that all students learn and participate together. Inclusive education has a broader goal to make society equitable and more just for all citizens in every aspect of life including education. Furthermore, for achieving true success in inclusive education in India there are several hindrances and challenges. Many problems such as, lack of well educated teachers, no proper staff training arrangements by Govt., effective curriculum, materials & resources, good infrastructural facilities, social awareness, positive attitude of academicians, plans, policies etc., all these issues creating obstacle in the true realization of inclusive education in India. Among above mentioned obstacles one of the serious problem is to prepare good, effective and competent Teacher/Professor/Academicians who can lead and practice inclusive adequately in educational institutions. The objective of this research paper is to point out the present scenario of major challenges in the field of inclusive

education in India and possible solutions to inclusive education barriers as well as how to overcome the challenges to inclusion.

Key Words: Study, UNICEF, Inclusive Education, Disability, Challenges, Success.

Attitude Towards Inclusive Education Among the Parents of Differently Abled Students

Dr. Julie Dutta

Assistant Professor,

Department of Education ,

Azad Hind Fouz Smriti Mahavidyalaya

Abstract

Inclusive education means that all children, regardless of their strength or weaknesses are accommodated in a school and become part of the same school community. The present situation in India reveals that generally children with special needs are sent to special schools. At present initiative are being taken both by government and private sector to make education inclusive in nature. This assessment was conducted to look into the attitude of parents towards inclusive education with special needs studying in special schools and those in inclusive schools of West Bengal. Information Schedule, Questionnaire and interview were used to collect data. Sample comprised of 120 students with special needs of West Bengal. The study provides an overview of attitude towards inclusive education of the parents with special needs children.

Key Words: Attitude, Inclusive education, parents.

Effects of Lockdown on Inclusive Education

Dr. Tapas Ghoshal

Sagarbhangra High school

Abstract

In this article the researcher attempts to analyse the positive as well as the negative impact of Lockdown on Inclusive Education. Inclusive Education is carried out in a common learning environment; that is an educational setting where students from different backgrounds and with different abilities learn together in an inclusive environment. But currently the entire education system is deeply affected by the lockdown in the COVID-19 epidemic situation. The

technology based online education system released this situation in the field of education. The study is based on purely from secondary sources. The study reveals that there is no doubt about digital mode has many advantages but it does not provide equal access to education for all students. Digital platforms are creating a social distance among the students especially between the private and public school system. The study concluded by an observation that in the present pandemic situation there is no alternative of online education but it is contrary to the concept of inclusive education.

Key Words: Lockdown, Inclusive Education, Digital education.

Inclusive Education and Challenges Faced by Special Education Teacher

Ms. Aditi Biswas

Lecturer in Psychology

Abstract

Inclusive education has been defined at various ways that addresses the learning needs of the differently able children. The efforts of the Government of India over the last five decades have been towards providing comprehensive range of services towards education of children with disabilities. But to every positive side of the coin there is a negative too. Though we have trained teachers for our Diving but there are challenges that our teachers face at the time of training and teaching children with special needs. This particular study was done for getting the perception of special education teachers the challenges and difficulties they face during the teaching process. In this study the targeted sample selected were 20 teachers both male and female who were teaching in different schools of Mumbai. A questionnaire was designed for data collection form the targeted population. The questionnaire was validated by special educators to whom the questionnaire was mailed. The data was collected by telephonic interview method. The aim of the present study is to find out the difficulties teachers were facing while teaching children with special needs and also about the measures that could be taken or strategies applied in reducing such challenges, the study also portray the ratio of classroom, administration support, parental engagement, curriculum and other variables included in the study. The ultimate aim of inclusive education is to provide the environment both for teachers and children were they can achieve their full potentiality. The study was done during the time of lockdown therefore another variable that came into the forefront was the online teaching that teachers and children both have to adapt. The questionnaire did not include such statement of online classes

but during the time of interview the special educators also share their experience and thoughts they are experiencing presently.

Key Words: Inclusive education, special teachers, special need children, challenges.

Role of Teachers' Self-efficacy in Inclusive Education: a Review

Arnab Kundu

Research Scholar, Department of Education,
Bankura University

Abstract

Purpose: Mahatma Gandhi said a person often becomes what he believes himself to be. This self-belief plays a very important role in human life which was later termed as 'self-efficacy' by Albert Bandura, one of the most highly cited academics in the world. Self-efficacy refers to one's belief in one's capabilities to organize and implement the courses of action needed to produce the given accomplishment having exclusive power to predict one's behaviour, efforts, resilience and endurance against adversities. Therefore, in education teachers' self-efficacy puts a big contribution in the overall teaching-learning atmosphere especially in challenging areas like inclusive education. The purpose of this literature review was to survey the scholarly sources studying the role of teacher efficacy in inclusive education.

Design: For this purpose a wide range of empirical and research-based articles published within the last ten years 2010 to 2020 from reliable databases such as the Web of Science, ERIC, Social Sciences Citation Index, Science Direct, SAGE Publications, Wiley Online Library, Taylor & Francis Online, Emerald Group Publishing, the European Union Database, the UNESDOC Database and Google Scholar were searched for following the descriptive analytic method.

Findings: The findings revealed that teacher self-efficacy is related to positive educational outcomes and the effectiveness of inclusive education depends a great deal on teacher efficacy. Therefore, school administrators and policy makers should consider developing ways to improve teachers' self- beliefs

about the beneficial outcomes of inclusive education for students with and without disabilities.

Key Words: SSN (Student with special needs); Teachers' self-efficacy, Inclusive education.

Children who Learn Together, Live Together : a Philosophical Perspective

Ajoy Das

Assistant professor in Philosophy

Kultikri Teacher Training Institute Of Higher Studies

Abstract

Education is a lifelong continuous process. Education helps a person to adopt to his family, environment and culture. There is a traditional stream of education that runs through formal education. Exceptional student are unable to participate in the general infrastructure of formal education due to their needs. As a result they become isolated from the mainstream of society. But education is a constitutional fundamental right of the individual. All type of children can have equal access to education if some additional initiatives are taken in the conventional infrastructure of formal education. Inclusive education is the extra initiative. The main goal of inclusive education is to include all type of children in education by making some necessary additions to the conventional general infrastructure of education. Children educated in special education are outside the mainstream of the education system from the very beginning, i.e. they are victims of division .So they cannot think of themselves as ordinary children of society. They keep themselves introverted. But through the inclusive education system, students with special needs can be connected to the mainstream of education.

So the main topic of my paper is what will happen to the students and the education system if the inclusive education system meets with special needs and the general students live together and received education. Learning in the same classroom of the same school can lead to psychological changes in the following subjects. Such as -Development of values, making changes in the student's desired behaviour, equal opportunity in education, interdependent attitude, diagnosis of errors of weaknesses, achieving overall development of

the student, the attitude we feel, Prevention of inferiority complex etc. I will discuss the four pillar of education that the 'Delors Commission' report mentions – i) Learning to know ii) Learning to do iii) Learning to live together iv) Learning to be . The main source of my paper is learning to know and learning to live together.

Key Word: Inclusive education, exceptional children, include, victims, Delors Commission, opportunities, psychological changes, live together.

How a Teachers Prepare for Inclusive Classes

Sibu Dey

Assistant professor,

Rishi Aurobindo Institute of teacher education

Abstract

Universalization of education is one of the biggest challenges facing all countries in the world. It is very important to enlighten all the students in terms of race, religion, caste, economic, social, cultural or physical and mental abilities. Today, after so many years of independence, about 26 per cent of our people in India have not yet been freed from the curse of illiteracy. For one thing, most people in the country have not yet been freed from the curse of poverty. Where food, clothing and shelter are not readily available to the people, then how education can come first. Not only poverty but also many other factors are hindering the universality of education. Such as social, political, economic, religious differences. Also gathering of students with various obstacles or special needs etc. So in order to make a real integration among the students of all these classes and to increase the confidence among the weaker students, a consensus universal education was needed. AS a result, the issue of inclusive education system came up.

The main content of inclusive education is one Nations, one integration , one school, one class, one teacher, one opportunity, one system, And at the same time an education system with students of all nations, all religions, all societies, all economic backgrounds, all abilities. But once you think about how it is possible? How? So think once, how a teacher would complete a 45 minute class with so many variety type of students. That is the Teacher, who has acquired only a little theoretical knowledge about inclusive education in his B.Ed. curriculum and nothing else. So, it's more difficult to arrange and also manage inclusive classes. So teachers need adequate training for proper classroom management. And with it the need to build the proper infrastructure

of the school such as adequate electronics and general TLM, resource room, etcetera etcetera. It is also important for the patience of the teacher, to understand the psychology of the students and to create an accurate learning designing. A compact teaching-learning process, which is suitable for all types of students will be implemented in Learning Designing. And at the same time teachers have to follow a number of personal tricks, such as arranging for students with disabilities to sit on the front bench. But of course the case will be different in the case of metropia or myopia. The bench also needs to be properly arranged to accommodate students with physical disabilities. The same subject will be taught differently by the teachers and will be arranged separately for God Gifted students or will be used as a separate task for them. And also Teacher's handwriting will be so clear, pretty and enlargeable.

I think, if we applying this variety type of strategies in such multiple way, I think if we use different strategies in this way, maybe the dream of inclusive education will be fulfil on ground level throughout by many skilful teachers. So dear policy makers please concentrate on to make resources person not only policy making.

International Webinar on Inclusive Education: Emerging Issues Challenges and Policy Perspective

Ardhendu Pramanik

Assistant Professor,

Rishi Aurobindo Institute of Teacher Education

Abstract

Inclusive education means that all students attend and are welcomed by their neighbourhood schools in appropriate regular classes and are supported to learn. Contribute and participate in all aspects of the life of the school.

Inclusive education is about how we develop and design our School classrooms programs and activities so that all students learn and participate together. Students participate in the education program in a common learning environment with support to diminish and remove barriers and obstacles that may lead to exclusion. The schools and classroom operate on the premise that students with disabilities are as fundamentally competent as students without disabilities.

Religious diversity is the fact that there are significant differences in religious belief and practice. It has always been recognised by people outside the smallest and most insulated communities. The religious diversity of students in a secular School system may sometimes create tensions.

A Study on Rights of Presons with Disabilities (RPWD) Act 2016 in India

Abstract

In this era we are see that discrimination in our present society in many context. Many times in our society we are see that torture on disabled children. The RPWD Act 2016 provided vital role for prevent these torture and this Act will promote the disabled children education, social security, health, skill development & empowerment etc. In this present study researchers discuss about salient features of Rights of Persons With Disabilities Act 2016 and also find out the status of implementation of RPWD Act 2016 in the state and UTs of India, the weakness of RPWD Act 2016 and the implication of RPWD Act 2016 of Inclusive Education. In this present study researcher found that the implementation status is very bad in the entire India and the Government would take many steps for solutions of this implementation status and also researchers found many weaknesses of this Act. This Act provided an important role to create an inclusive learning environment for disabled children.

Key Words: Disabled children, RPWD Act 2016, Inclusive education.

Inclusive Education : All Means All

Jayashree Palsai

M.A Student, Department of Education, The University of Burdwan

Abstract

Many definitions of inclusive Education have been evolved throughout the World . Clark et. al (1995) define inclusive education as the extension of the scope of ordinary school to include greater diversity of children. The World Wide consciousness in favour of inclusive education has now become the matter of concern of all the persons who are Policy makers, Administrators, Teachers , and other field workers related to Education. There are some reasons which will lead the education system as to be inclusive one in reality. The aims of inclusive education are acknowledge that all children can learn and need support .Change attitudes, Behaviours, Teaching methodologies Curricula and environment to meet the needs of all learners. Inclusive Education is not just a Technical or Organizational approach there should be a guiding Principle for transition to inclusive education we should look forward and have determination for breaking down the segregation. Countries like South Africa, Spain and England hour started the process of reformation keeping Inclusive Education at the core and inclusion is the precondition of bringing Quality Education for all in these countries. For the mission of Education for all our vision should be inclusive of all in main stream Education and for this purpose we should relay on:“**ALL MEANS ALL**”.

Key Words: Mission of Education – Inclusive Education for all –All means all - Learn together - Live together
